# Chimney Balloon® Measurement Instructions

Chimney Balloon LLC  
2123 N Pontiac Drive  
Janesville, WI 53545  
www.chimneyballoon.us

## Sizing for a Chimney Balloon:

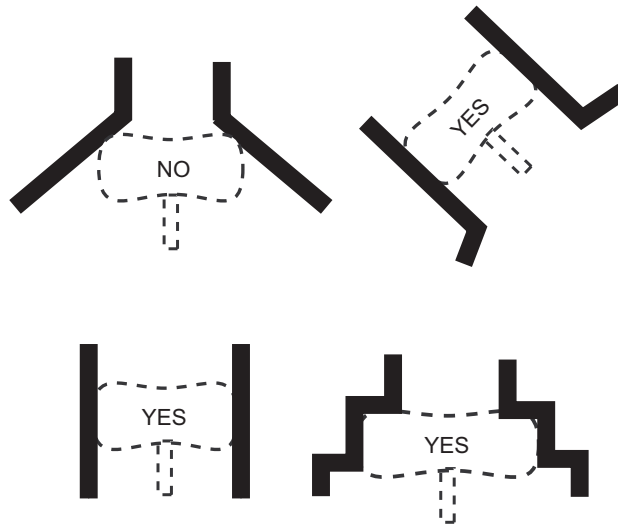

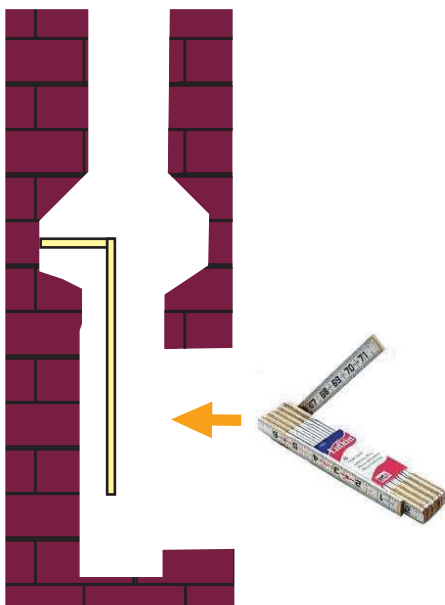

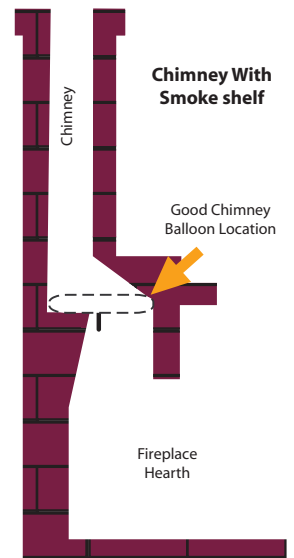

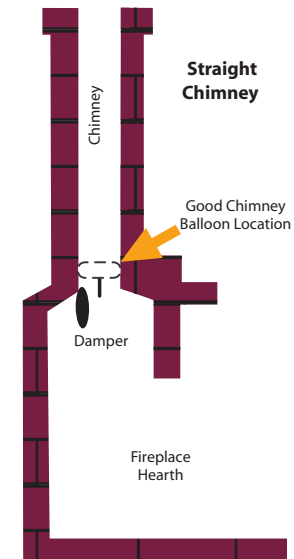

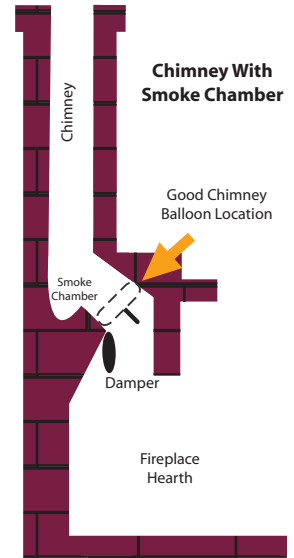

- 1) Before sizing your chimney make sure your fireplace and chimney is cold and you have no hot embers in your fireplace that can be a danger to you. If you sweep and vacuum your fireplace ash first, you will find this whole process of measuring much cleaner. But never vacuum hot ash!
- 2) With safety goggles on, look into your chimney and identify the damper, if you have one, (a metal flap that closes the chimney). Also identify the most narrow section of your chimney within reach.

- 3) Follow these guidelines when selecting an area to install a Chimney Balloon. Select an area that is not interfered with by the damper flap or any hardware. The area must have parallel or slightly sloping walls with significant texture for the balloon to grab and lodge in during inflation. (*diagrams below*) Just above the damper is often an ideal location to install a Chimney Balloon. If your installation point cannot be easily touched by hand you will want to purchase an HEK extender with your Chimney Balloon. The HEK Extender will make the install much easier.

### Notes on smoke shelves or smoke chambers:

If you have a ledge in the chimney, measure above the ledge to use it to support the Chimney Balloon. If the ledge dips down into a smoke chamber, install the Chimney Balloon below the chamber if possible. (*See diagrams*). Although it may be possible to find a suitable location in or above the smoke chamber.

- 4) Measure the length and depth of the location you choose to install a Chimney Balloon. It is possible to measure with a standard tape measure, but it is easier to measure with a foldable carpenters ruler.
- 5) We recommend that you buy the Chimney Balloon that is exactly the same dimension of your install location. But, It is OK to buy a Chimney Balloon that is up to 6 inches larger in either dimension than your measured opening, since you will be inflating it into place. DO NOT buy a Chimney Balloon that is too small for the measured opening.
- 6) Fill out the order form and mail or fax it in, or place your order online at [www.chimneyballoon.us](http://www.chimneyballoon.us).

### \*\* HELPFUL TIP \*\*

A folding carpenters ruler is very useful to measure the inside of your chimney or damper area.
